# Using the Turtle

The Turtle allows you to re-radius motor brushes for either vertical or horizontal brush hoods. The turtle has a slot in top for both.

**JK Products
Brush Tool (Turtle)
JK 8037**

Using your favourite brush radius tool, drop this into the slot under the Turtle (you may wish to space the shaft out if it's the short type as shown) to keep it within the "window" of the Turtle that you want to use.

Turn the Turtle over and insert the motor brush into the required brush window (either Vertical or horizontal), apply light pressure to the brush and then roll on a flat surface. Your motor brush has been re-radiused!
