

Product code: SP39

Description: X4 grease, 15g

New product

This grease, free of resins and acids, has a special PTFE-based composition with extra fine particles. It seals most micro pores thus creating an extra smooth surface with excellent friction properties. The PTFE layer remains in place even after the grease is no longer visible, forming a long lasting dry lubrication. The protective film also acts as long-term preservation against humidity, (salt)water, and hand perspiration, preventing rust, oxidation and seizing. Perfect for gears, ball-bearings, motors. It can also be used to protect non moving parts.
