

## TEP7012

### Flexi/LTO Stock Car Heatsink

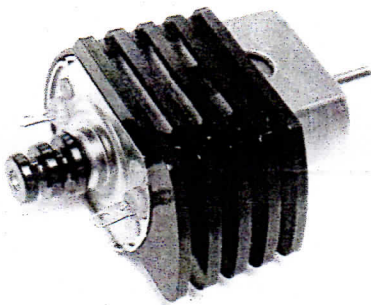

#### DIRECTIONS:

This heatsink was designed to tightly fit the FK style motor (Evil 9, Demon, TSR, F7, & Falcon) for maximum heat transfer. Because of this, the heatsink **MUST** be installed from the end rather than trying to snap the heatsink over the top of the motor. Snapping it over the top of the motor will slightly bend the sides making a loose fit to the motor can.

1. Remove any stickers or labels from the side of the motor can.

2. Slide heatsink on the motor from the pinion end.

3. Slide heatsink all the way to the brush end of motor, and install motor in car!
